

Bài 4

```
public class Car {  
    protected String to color;  
    protected double speed
```

```
    public Car(String color, double speed) {  
        this.color = color;  
        this.speed = speed;
```

```
    }  
    void accelerate() {  
        speed += 10;
```

```
    }  
    public String getColor() {  
        return color;  
    }  
    public double getSpeed() {  
        return speed;
```

```
    }
```

```
}
```

```
public class Bmw extends Car {
```

```
    public Bmw (String color, double speed) {
```

```
        this.color = color;
```

```
        this.speed = speed;
```

```
    }
```

① Override

```
    public void accelerate() {
```

```
        speed += 20;
```

```
    }
```

② Override

```
    public String toString() {
```

```
        return "BMW [color = " + color + ", speed  
= " + speed + " ]";
```

```
    }
```

```
}
```

```
public class Civic extends Car {
```

```
    public Civic (String color, double speed) {  
        this.color = color; super (color, speed);  
        this.speed = speed;  
    }
```

① Override

```
    public void accelerate () {  
        speed += 15;  
    }
```

② override

```
    public String toString()  
        return "Civic [color = " + color + ", speed  
        " + speed + " ]";  
    }  
}
```

```
public class car {  
    public static void main ( String [] args ) {
```

```
        BMW bmw = new BMW ( "Den", 100 );  
        Civic civic = new Civic ( "Bang", 90 );
```
